## **The ultimate multi-purpose meeting desk system.**

Seating arrangements for conferences or trainings determine the efficiency and the effectiveness of sessions. Having the proper seating arrangement can impact everything from team dynamics to comfort and visibility. We have designed Nest as a functional solution for areas of collective work such as meeting halls, classrooms and conference rooms but you may also use it at your home offices. By making it easy to move around, we aimed to provide a versatile solution that is readily adaptable to the changing number of participants or the purpose of use.

Nest tables will help you prepare your venue for a number of applications including or individual or team work, planning or strategy meetings, focus groups, information sharing events, conferences, seminars, discussions and more.

Nest line of products features various builds: The Angled Starter, Angled Mid and Straight Desk designs, namely. Arrange them perpendicular, in hollow rectangular, classroom or chevron style or in U or V shapes. Nest desks can be interconnected through a special assembly unit when arranged side by side. Cable tray is concealed under the desk pad and houses 2 data and 3 mains sockets. Optional aluminum covers on the desktop facilitate access and prevent visual pollution. Distribution between desks is made easy through interconnecting cable troughs.

- Functional and flexible use for a variety of spaces.
- Store away foldable and stackable design.
- Optional mesh cloth front panel for individualization.
- Easy access to mains and cable connections.
